

Well we do know there are a number of prototypes he came up with, though. Lots of trial and error. It wasn't a fluke!

That's right. This included molded type setting. Molded type setting involved making a mold for each letter character which could be re-used. This saved a lot of time!

A black and white illustration of a woman on the left and a man on the right. The woman is wearing a ruff collar and a headband. The man is wearing a fur-trimmed robe. They are both looking towards the center where a speech bubble is located.

Quite a legacy, eh?

Well, not exactly. Unfortunately, it is not easy to work out which of the many surviving texts of the subsequent period were actually printed in Gutenberg's workshop. Unlike today there were no copyright laws.

A black and white illustration of a man in a fur-trimmed robe, looking towards the right. A speech bubble is positioned above him.

Added to that is the fact that Gutenberg never added his own name or even the date on any of his printed works!

In the end, his contribution is perhaps best summarised by Mark Twain.

How's that?

What the world is today, good and bad, it owes to Gutenberg. Everything can be traced to this source, but we are bound to bring him homage...for the bad that his colossal invention has brought about is overshadowed a thousand times by the good with which mankind has been favored.
